WELCOME TO MTM TILE SHOWROOM!

At MTM Tile Showroom, we have over 30 years of experience in providing bespoke tiling services to both the commercial and consumer market.

Our showroom, conveniently located just outside the beautiful town of Taunton in Somerset, now also offers a wide range of high-quality bathroom products. Situated in the picturesque village of Blagdon Hill, our showroom is set on the village green, making it a convenient destination for all your bathroom needs.

HIGH QUALITY PRODUCTS

By integrating high-quality bathroom products and professional installation services into our existing range of offerings, we aim to provide a one-stop solution for all your tiling and bathroom needs. Visit us at MTM Tile Showroom to explore our exquisite collection and bring your dream bathroom to life.

We have worked in a variety of environments including several prestigious and inspirational acclaimed projects. One you can view publicly is The Bishop's Palace in Wells (pictured below).

SPECIALISED SERVICES

MTM Tile Showroom specialises in offering comprehensive consultations to design the perfect look for your home. Our extensive tile range, which includes exclusive natural stone tiles and Italian porcelain, is perfect for creating stunning bathroom designs.

In addition to our exceptional tiling services, we are pleased to announce that we now provide professional bathroom installation services, catering to all your bathroom renovation needs.

PROVEN EXPERIENCE

Our commitment to excellence is echoed in our extensive list of 5-star Google and Facebook reviews – a testament to the seamless service and top-quality products we offer. Exceptional craftsmanship trusted with heritage properties is at your disposal. We will ensure that your vision for a luxurious tiled space becomes a reality.

MTM'S SERVICES

Streamline your tiling from start to finish using our exemplary services, each designed to ensure a stress-free tiling journey.

Tactile displays unleash your creativity and our consultations ensure a water-tight plan for installation day. You can even manage the whole process from your home or office.

Take a look!

CONSULTATIONS

We understand how frustrating it can be when online retailers can leave you waiting for a response, or waiting for samples to arrive, leaving much of the process to guesswork and consuming a lot of time. A tiling or bathroom installation is a significant investment that most of our clients enjoy for well over a decade, so

why not design each element of your space?

We, at MTM Tiling, offer a direct and tactile experience, supplying you with swift responses, allowing you to handle tiles and take away free samples to test in your own home. We pride ourselves on providing high-quality, personalised service, which is why our clients are afforded a lifetime guarantee on all Kerakoll products and a two-hour consultation to determine all the details from grout colour, texture, finishes and more. The consultation process relieves the pressure of the decision-making, allowing you to plan ahead, make amendments and facilitate a smoother installation of your dream tiled area.

5

Supplying you with an information pack is one of the ways in which we shall aid you in making an informed purchase about all the details of your tiled space. Containing only the information you need to know and a little extra, you won't be overwhelmed as you can always contact us during opening hours for advice or to answer any queries.

Our dedication to client experience also extends outside the showroom, as MTM Tile Showroom can also offer our own tiling service and aftercare support. We can arrange with you if you would like us to supply to a contractor or another trading service, or streamline the process and have our tilers perform the installation instead.

REMOTE RETAIL

Browsing tile catalogues and researching tiling terms can be time-consuming and exhausting. Especially when the design you like may not be appropriate for wet areas or outdoor use, starting the search all over again.

Save yourself time and energy by telling us what you want, and our experts will provide you with a selection of dream tiles via a personalised video, from which to choose your perfect one!

After contacting us with the relevant information, our experienced and knowledgeable team shall search for a selection of tiles that meet your criteria and record an informative and succinct video from which to choose your tiles.

We can then send you samples of your tiles so you can see them in person and in your space. If a suitable tile is found, you can order remotely and we can send

your order direct to you.

MTM'S SERVICES

ALL IN ONE BATHROOM INSTALLATION

We offer comprehensive, all-in-one bathroom installation services to streamline the process and alleviate the stress. From design conceptualisation to final execution, we handle every aspect of your bathroom remodel with precision and care, including heating, plumbing, and electrics, ensuring a seamless experience from start to finish.

We believe that the key to a successful bathroom design and installation lies in the quality of materials used. That's why we source only the finest tiles and materials from trusted manufacturers. From premium tiles to durable grouts and everything in between, we ensure that every element of your bathroom is of the highest quality, guaranteeing longevity and timeless appeal.

VETTED TILERS

At MTM Tile Showroom, we understand the importance of flawless craftsmanship and professionalism in bathroom fitters. That's why we work exclusively with vetted tilers, who have been carefully selected for their exceptional skills and dedication to delivering top-notch results, including shower installation.

7

Rest assured, your project will be handled by experts who take pride in their workmanship, ensuring your satisfaction with every tile laid.

IN-HOUSE TILING SERVICE

Whether you require tiling for your home, business or restoration work, MTM Tile Showroom can expertly accommodate your tiling needs. Based in Taunton, Somerset we have over 30 years of experience, tiling a wide variety of projects for domestic and commercial establishments, as well as restoring historically significant architecture including churches.

Domestic Tiling • Commercial Tiling • Restoration
Waterproofing & Tanking • Underfloor Heating

EXPERT TILING ASSIST

Tiling yourself can be one way to lower costs and create a great sense of pride seeing the finished result of your handiwork. However, we've all experienced the woes of missing information in YouTube tutorials or bad advice from unvetted 'experts', which is why we've created Expert Tiling Assist.

Receive expert advice from tilers with 30 years + in the trade. No need to spend hours on YouTube, getting half the information from unvetted strangers. Get personalised guidance for your project to reduce waste, mistakes, and learn tips for stunning results.

What's included?

For **ONLY** £100, you'll have:

- Level lines drawn and assessment by an experienced tiler, delivering personalised guidance & material list.
- Trade-rate materials (adhesive, etc.).
- Trade-rate tiles at our showroom.
- Expert at the end of the phone (2x 20 minute calls).

UND

Underfloor heating not only improves your heating bills and comfort, but also the space in your home. The absence of radiators frees up your room layouts and interior design creativity, and you no longer have to worry about bumping into their metal corners or hot surfaces - particularly great if you have children or find yourself struggling for space. It is estimated that radiators take up 10% of your wall and floor space in your entire home. Just think how you could put that to use!

So where to begin?

There are two main types of underfloor heating: water and electric. Both are great at providing consistent warmth efficiently; let us explain how. Traditional radiators require heating to around 65-75 degrees Celsius to effectively warm a room, whereas underfloor heating needs to only run at 29 degrees Celsius (or less depending on the floor's finish) to accomplish the same goal. This highlights the first benefit of underfloor heating, using less energy, which is not only great for the eco-conscious but also the wallet-conscious by reducing those bills.

9

UNDERFLOOR HEATING

But why is there such a disparity in running temperatures? Part of the reason radiators run so much higher is due to trying to eradicate cold spots, a problem intrinsic to how they circulate heat. Radiators heat their relatively small surface area (compared to the room) first and then warms the air particles closest to them. The heat gradually diminishes as you get further away due to most of it rising up and away from the rest of the room. To combat the cold spots, you may open a window to use the flow of air to pull the heat across the room, but this results in having to run higher temperatures as you release the heat to the outdoors and heating new cold air.

Underfloor heating emits heat across the whole floor surface area, allowing heat to rise from every inch, and eliminating issues of cold spots and cold feet!

CHEAPER, EASIER & EFFECTIVE

Here at MTM Tile Showroom, we install electric Devi systems which are cheaper and easier to install compared to their water counterparts. Their small size means there is little impact on floor height compared to water counterparts (for example, a 4mm Devi matt versus a 60-100mm concrete layer on top of the water tubes - that's a large space saver!) and this also facilitates installation during renovation without rebuilding your floor. With an up to 20-year guarantee on your high-quality Devi product, and manufactured with the highest EU standards of quality control, you can put your mind and feet at ease with your heated floor system.

MTM'S SERVICES

Securing exclusivity to the supply of these sought-after and unique collections of stones expands your options to acquire an unparalleled, authentic & traditional stone tiles for your period or traditional styled home - unobtainable from other manufacturers!

Timeless Stone's curated selection of finishes and sizes from hand-selected A-grade stones create a believable & timeless worn appearance due to their keen attention to detail and historical accuracy.

Traditional stone tiling contained stones of random lengths and occasionally rows of differing widths. Matching this characteristic has never been easier to achieve with 400 x random, 500 x random and 600 x random sizes. These sizes provide exceptional authenticity whilst catering for large and small room sizes. Combined with a mix of three tailored finishes Timeless Stone supplies for two of their popular stones, along with various detailed finishes on the complete range, you can recreate a realistic patchwork for an aged and timeless floor!

We can also offer a site visit by our stone floor specialist to aid in designing a perfect balance of sizes and finishes for a truly stunning traditional result should you wish.

ALLOY SPLASHBACKS

Looking for an alternative to tiles, acrylic & glass to bring your dream kitchen to life? Why not look at our range of NEW alloy splashbacks! These beautifully patterned metal splashbacks can fill the entire space behind your hob or sink without compromising safety.

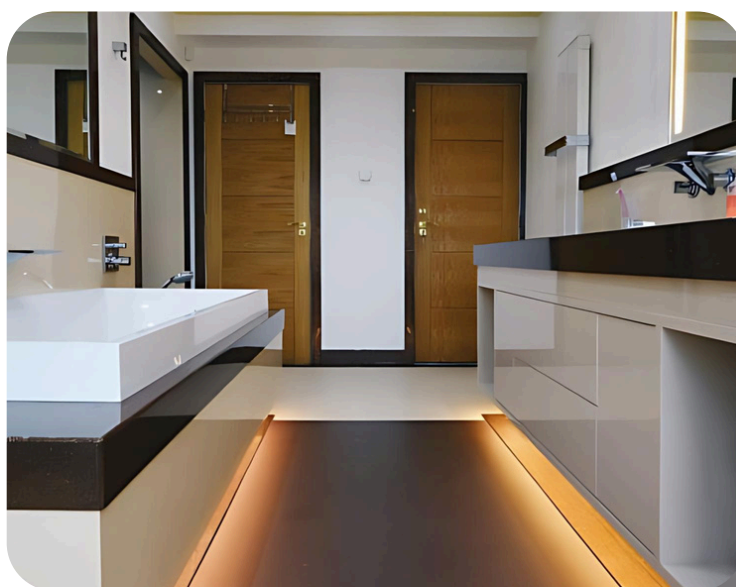

These splashbacks are not only stylish but are built for uncompromising safety too. Behind your sink or the hob, their waterproof properties prevent water ingress, protecting your walls from damp. When in the hot zone, their steam, heat & fire-resistant properties ensure that your home is protected from cooking hazards.

DESIGNER LIGHTING AND TRIMS

We have an extensive range of trims for creating striking interiors. These high-quality trims, are meticulously crafted to meet the standards of the most discerning designers. Each trim is a testament to precision and style, offering you the perfect finishing touch for your tiling projects. With varying finishes and colours you can find the perfect trim for your tiling.

Illuminated trim edges/ skirtings and steps that can be turned off or dimmed just by using your voice!

BEYOND INSTALLATION

HIGH-QUALITY MATERIALS

With every one of our installations, we strive to deliver a bespoke service and fitting, finished to perfection so that your tiles will last for many years. To accomplish this, we source our products from leading brands such as Kerakoll to ensure your tiles are treated to the highest quality, and with a large colour selection to allow you the diversity and choice to design each detail of your tiled space to perfection.

In our pursuit of quality customer service we also extend this ideal to our product range. Why? Not just because 'you deserve the best' but because we feel a duty of care to ensure that the products used by our retail & trade customers are safe to use and safe for the homes to which they're installed.

For many years certain products, particularly epoxy, contained chemicals which for some would irritate the skin during the application process. Other products leech chemicals over the course of their lifetime (which is a natural phenomena). The good news is that you don't have to worry about this anymore, as many companies have iterated and improved upon their formulas and the components used in their products, but we supply a few brands which go above and beyond good safety practice.

13

Kerakoll's industry-leading product features

GREEN BUILDING

Many are looking to keep their projects in-keeping with green-building practices and nothing is simpler than using Kerakoll's product line or Eco-Pro-Tec's aftercare range. Our in-house tiling services use them and in many cases it doesn't just meet the clients eco requirements, but it's simpler too. Biogel No Limits is a multi-purpose gel adhesive that reduces the number of products taken on a job while still providing a high quality and easy to use product.

EcoProTec is our go-to for our sealers and cleaners so even your aftercare can ensure a high-quality result while enjoying eco-friendly benefits and safety (low odour and non-hazardous being two valuable traits).

AFTERCARE

One of the key factors that determines longevity is aftercare. For stone tiles, such as travertine, this is extremely important in ensuring a long lifespan for your tiles. We can arrange with you an aftercare package where we will return periodically to clean and reseal the floor to maintain and protect your installation, ensuring you get the most out of your purchase.

Alternatively, MTM Tile Showroom can also offer guidance and recommend products available for purchase in our showroom so that you may conduct the aftercare process yourself.

When you enjoy a consultation with us we will provide detailed product sheets for all products relevant to your project to ensure that you know what you're getting and installing in your home. This is for your ease of understanding as much as anything, and to ensure that you have an organised installation if you're doing it yourself.

PROJECT NOTES

A large, empty rectangular area with a light green border, intended for project notes.

GLOSSARY

Materials, Production & Colour Terms

Ceramic - Produced with red, brown or white clay, these tiles are softer and less dense meaning they are easier to cut, drill and ideal for wall applications. Due to their high water absorption, ceramic tiles are always glazed.

Limestone - A hard wearing stone that can come in a variety of colours from shades of white to deep black. It can be used in almost any environment due to the wide selection of finishes that can be applied to it.

Marble - Formed over millennia from limestone, this crystalline rock is extremely durable making it ideal for floors. Due to the creation process, veins and colour changes can appear in the stone which can look like faults but are actually an inherent characteristic of the stone and are of no concern. Marble can come in a variety of textures and finishes due to its versatile nature.

Porcelain - These tiles are made with white clay and fired at a high temperature making them dense, hardwearing and perfect for floors. They have an extremely low water absorption rate of less than 0.5% making them well suited for bathrooms and wet rooms. Porcelain tiles can be glazed or unglazed.

Travertine - A pale stone with inherent pits and holes which can be filled. It's marble-like qualities make it easy to cut making it suited for internal walls, floors, showers and hearths. It is not recommended for outdoor use as it is susceptible to frost damage.

Rectification - This process involves removing the edges of the tile to give a cleaner finish and meet size specifications. Tiles cut in this manner have a uniform size thereby reducing grout joints to a minimum.

Rectified Glazed Porcelain - These are porcelain tiles that have been cut during the manufacturing process to meet the exact sizing requirements. They are much more aesthetically versatile, coming a variety of finishes including matt, glazed, metal effect or stain.

Non-Rectified - Non rectified tiles have natural, uneven pressed edges that may vary slightly in size and require a wider grout gap.

Ink-Jet - A term that refers to the print or pattern on the tile which has been applied using an ink-jet printer.

Full-bodied - This refers to tiles whose surface colour is the same all the way through the tile. Also known as 'through-bodied' or 'technical' porcelain, these tiles are made of a single material with no glaze applied making them extremely hard wearing and perfect for any application.

Texture, Finishes & Format Terms

Brushed - The stone's surface is brushed with rotary diamond pads, resulting in a textured finish to the surface and rounded edges.

Cushioned/ Pillowed - The straight edges of a tile have been rounded and softened.

Filled - Voids, pits and holes (a natural characteristic of some stone) in a tile have been filled with a resin to create a smooth surface.

Honed - A machine process which results in a smooth, matt surface.

Lightly Polished - The tile's surface is polished to a softly reflective sheen.

Polished - The tile's surface is buffed by a machine, resulting in an even, smooth and highly reflective surface.

Tumbled - The surfaces of the stone have been textured, worn and weathered by contact with abrasive materials.

Unfilled - Voids, pits and holes within travertine have not been filled prior to installation. However, they can be grout filled.

Bevel Format - The tile has been cut to create angled edges that slope away from the flat top surface.

TESTIMONIALS

“ It really lived up to it's name! Mark set out how the tiles should be laid and over 2 hours we received a 'crash course' on tiling. We are delighted with the results we achieved and we would never have archived it without the advise and support we received.

- Lynne Drake ”

“

We had our whole bungalow tiled. So pleased with it!
Will use MTM Tile Showroom again for sure.

- Sally Pavey ”

“

A wonderful company who looked after us from the beginning of the process to completion. The attention to detail from Mark and David, the tiler, was first class and our best experience to date.

Would highly recommend.

- Mr & Mrs Burt ”
